

Gallery Shelf Rail *Components*

Our Cotswold Gallery Shelf Rail's are made up of a selection of solid brass components, allowing you to create a configuration to suit your shelving.

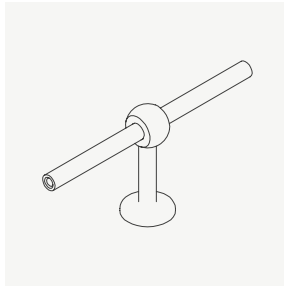

End posts finish and sit at each open end of the gallery rail, through posts connect multiple rail sections, and corner posts allow for side returns. Gallery rail bars connect to each post to form the finished rail.

Depending on your chosen configuration and shelving material, your gallery rail may include wall brackets in place of end posts. Brass push-fit dowels or adhesive pads will also be supplied according to the fixing requirements.

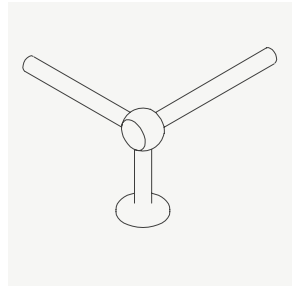

Components supplied will vary depending on your chosen configuration.
